

Faculty of Science
DEPARTMENT OF MATHEMATICS AND STATISTICS
Course Information Sheet

1. **Course:** PMAT/STAT 419 - Information Theory and Error Control Codes **Fall 2003**
Lecture Time : L01 : MWF 11:00 – 11:50 MS 317
Instructor: M. Fenyvesi
Office: MS 468 **Phone:** 220-3965
email: fenyvesi@math.ucalgary.ca

2. **Prerequisites:** Math 311 and 321 or any Stat course or consent of the Division.

NOTE: The Faculty of Science policy on pre- and co-requisite checking is outlined on page 198 of the 2003-2004 Calendar. **It is the students' responsibility to ensure that they have the pre- and co-requisites for the course, and if they do not they will be withdrawn from the course without notice.**

3. **Fee policy:** After the last day to drop/add courses, there will be no refund of tuition fees if a student withdraws from a course, courses or the session.

4. **The University policy on grading and related matters** is described on pages 41-42 of the 2003-2004 Calendar. In determining the overall grade in the course, the following weights will be used:

Assignments	[approximately 5]	25%
Mid-term Test		25%
Final Exam		50%

There will be a final examination scheduled by the Registrar's Office.

The use of aids such as open book, etc. is not permitted.

5. **Missed Components of Term Work.** The regulations of the Faculty of Science pertaining to this matter are outlined on page 199, of the 2003-2004 Calendar. It is the student's responsibility to familiarize herself/himself with these regulations.

6. **Academic misconduct** (cheating, plagiarism, or any other form) is a very serious offence that will be dealt with rigorously in all cases. A single offence may lead to disciplinary probation or suspension or expulsion. The Faculty of Science follows a zero tolerance policy regarding dishonesty. Please read the sections of the 2003-2004 University Calendar under the heading "Student Misconduct", pages 53-56.

7. **There will be no out-of-class-time activities.**

8. SCUM

The Society for Calgary Undergraduate Mathematics is located in MS337A. They sell exam packages, run final reviews, and can often assist with problems. The office is open from 10am to 3pm Monday-Friday, and you are welcome to drop by. We look forward to meeting you!

9. Support Materials

Part of the out-of-print text “Information Theory and Coding”, by Abramson, has been copied and is available in the Bookstore. This covers most of the topics in the first half of the course. No text will be used for the second half, but from time to time, some notes will be given out in class.

8. Exercises

Exercises will be assigned periodically and solutions will be discussed in class. It is important that all students solve these exercises as this ensures that course material is reviewed and that practice is obtained in applying the theory. It is not sufficient to just watch the instructor solve the exercises, as it is by reviewing the theory and then analyzing the problem and writing out the solution that theory and practice are related and the course content is learned. It is fine to discuss the exercises with other students.

10. Assignments

Four or five assignments, to be handed in for grading, will be given throughout the course. Some questions will involve calculations or constructions, while others will be more abstract. It is expected that students will solve the assignment questions alone and that careful solutions will be written. Assignments should have a cover sheet with your name, **but not your ID**, written at the top.

11. Attendance at Lectures

Attendance at all lectures is expected.

12. Examinations

A variety of questions will appear on examinations, some involving calculations or construction, some asking for definitions or theorems to be stated or discussed, as well as showing the proof of a theorem – a theorem previously proved in class. The final examination will be comprehensive but will have an emphasis on the material covered following the midterm examination.

13. Office Hours

Come to my office any time you have questions. If you know when you would like to come you can speak to me after class or send an email to make an appointment, or just drop by.

14. Course Content

- Concepts of information theory
- Information sources including zero-memory and Markov sources
- Codes including uniquely decodable and instantaneous codes
- Shannon's Theorems
- Huffman codes
- Channel capacity
- Error correcting and detecting concepts and codes
- Linear codes including Hamming codes and perfect codes
- Reed-Muller codes and cyclic codes
- Decoding methods
- The idea of convolutional codes.

This course uses both probability and algebra in these topics.

ACADEMIC SCHEDULE

September 8 (Monday)	Lectures begin.
September 19 (Friday)	Last day to change registration in Fall session courses. Balance of fees due. No fee refunds for withdrawals after this date.
October 13 (Monday)	Thanksgiving Day - No lectures.
October 24 (Friday)	Mid-term exam.
November 8-11 (Thursday – Sunday)	Reading Days - No lectures.
December 8 (Monday)	Last day of lectures. Last day to withdraw from Fall Session classes.
December 12-22	Final examination period for Fall Session.
